

—AN ATLAS COMPANY—

Environmental Health and Safety Training

Our customized training programs help clients develop a highly trained workforce, ensure a safe and compliant workplace, and get the most from their training investment.

Training is not simply a regulatory requirement or a compulsory exercise. A well designed and executed training program is the cornerstone of a strong safety culture that provides a significant return on investment by increasing safety awareness, ensuring compliance, reducing workplace incidents, and ultimately lowering operating costs.

ATC's training programs are based on over 35 years of practical industry experience, and our trainers and curriculum developers are current practicing professionals. We can meet clients either at one of our 100+ locations across the country or at their sites to perform a thorough training needs assessment to develop a customized training program.

By taking the time to understand our clients, their business drivers, and their company cultures, we can provide training that engages and motivates employees. Our unique approach to integrating daily work experiences and routines into the training facilitates increased health and safety awareness, which often leads to higher workplace function, better efficiency, and greater productivity. The true value in our training programs comes from providing an experiential learning component that is critical to curriculum content retention as well as reinforcement of a behavior-based safety program.

We offer training courses to suit our clients' needs, whenever their employees need it. Courses can be conducted during first, second, and third shifts, weekends, and holidays. Our online training content is available 24/7, year round.
