NOVEL CORONAVIRUS RESPONSE SUPPORT SERVICES
Businesses, governments and organizations throughout the U.S. are struggling with maintaining operations in the face of the current pandemic. Whether considered an essential function, or assessing specific challenges associated with re-opening, ATC Group Services LLC (ATC), an Atlas company, can support your organization’s Novel Coronavirus response program with critical planning, scope development, execution, testing and verification activities. Our national team of experienced industrial hygienists can provide the technical information necessary for appropriate risk assessment and response. We understand that response decisions will have operational and financial impacts to your organization. ATC/Atlas is committed to providing accurate information and value added counsel to best enable these difficult decisions and partner with your organization to complete and document those activities to best protect the health and safety of your employees, customers and communities.

SERVICES OVERVIEW

Our team is currently providing novel coronavirus consulting services to our clients. Our teams have completed safety planning, exposure pathway assessments, cleaning protocol development, field oversight and disinfection verification for multiple clients at more than 100 locations throughout the country.

WHY ATC/ATLAS

➤ Professional, 3rd party organization to help establish disinfection scope and cost
➤ National Novel Coronavirus response program planning and response experience
➤ Provision of disinfection verification documentation to best manage associated liability
➤ Expert in application of SARS-CoV2/COVID-19 response guidance provided by Centers for Disease Control and Prevention (CDC), American Industrial Hygiene Association (AIHA), Occupational Safety and Health Administration (OSHA), Environmental Protection Agency (EPA), and other involved agencies

OUR SERVICES

Exposure Assessment
Our trained staff will inspect your facility and identify medium to high contact surfaces recommended for active disinfection. This is a critical step and will ensure that costs are controlled while providing required protection. As your business considers re-opening we can provide recommendations for operational modifications to minimize the risk of transmission, as well as measures to follow if positive cases are identified within the workforce.

SARS-CoV2 Exposure Control Plan (ECP) and Disinfection Protocol
Development of an operation specific exposure control plan to address employee spacing, traffic flow, work shifts, staff screening/testing, contact tracing, and other applicable measures to ensure business continuity. This ECP will include a site specific disinfection protocol with sufficient detail suitable for provision to a disinfection contractor or janitorial service. This protocol will provide information required for cost estimating and completion of cleaning activities. Our protocol accounts for building variables associated with exposure extent, affected areas and surfaces, exposure duration, etc., that will impact the effectiveness of disinfection. The ECP and disinfection protocols will be developed in accordance with guidelines from the Centers for Disease Control and Prevention, World Health Organization, Occupational Safety and Health Administration, Environmental Protection Agency, and American Industrial Hygiene Association.

Turnkey Disinfection or Oversight Services
Provision of complete turnkey disinfection services including surface disinfection, electrostatic fogging and use of other approved methods through a network of pre-qualified national and regional disinfection contractors. Our PM/CIH led teams will ensure delivery of these services in a technically sound and cost-effective manner. Our trained staff can also provide 3rd party oversight and documentation of disinfection contractor activities, or train janitorial staff to provide disinfection services in accordance with CDC requirements and best practices.

Documentation and Communication
We can provide post-disinfection verification services including field inspections, testing and verification reporting. We can provide timely and targeted communication for distribution to key stakeholders such as staff, customers, and community organizations to promote confidence in your response programs. This can include COVID-19 education and awareness programs and disinfection verification reporting.

ATC/Atlas employs 26 Certified Industrial Hygienists (CIH)s nationwide as well as 15 Certified Safety Professionals (CSP)s including 10 dual-certified CIH/CSP. We have over 500 specially trained and experienced Industrial Hygiene technicians located across the country.

CIH staff have experience with virus control services including Novel Coronavirus, Norovirus efficacy testing and Meningitis Virus Cleaning Protocol.

Our CIHs are qualified for chemical, biological, radiological and nuclear (CBRN) defenses. They are trained and practiced in the protective measures taken in situations in which CBRN hazards may be present. CBRN defenses consists of passive protection, contamination avoidance, and decontamination.

ATC/Atlas assists with disaster recovery industrial hygiene services representing numerous insurance, restoration, and hospitality companies. We can mobilize staff from around the country to provide critical post-loss industrial hygiene services. We’ve mobilized over 100 staff members throughout the continental USA and Puerto Rico to support recovery efforts after hurricanes Harvey, Irma, Maria, Michael, Florence and Dorian.

Our CBRN capabilities and experiences directly relate to the current Novel Coronavirus outbreaks and the Public Health aspects of response.

Relevant industrial hygiene services:
- SARS-CoV2 Exposure Control Planning
- Customized Disinfection/Decontamination Exposure Assessments and Protocols
- PPE Assessments
- Disinfection Chemical Product Evaluations
- Staff Decontamination Training
- Staff Coronavirus Hazard Communication Training
- Disinfection oversight, management and documentation
- SARS-CoV2 laboratory analytical testing
- Disinfection Documentation Certification
- Development of Additional Written Support Materials
